Domain 6: Governance, risk and responsible use (15%)

Claude Certified Associate Foundations course · cheat sheet

6.1 Appropriate and inappropriate use

Claude helps people decide. It doesn't decide about people, and it doesn't give final answers on health or safety.
Avoid: 1. letting Claude make people decisions · 2. reassuring answers on health or safety · 3. refusing to use Claude at all, when it could help safely

6.2 Data sensitivity, privacy and anonymizing

Classify, minimize, anonymize. Telling Claude not to keep something isn't protection. Removing it before upload is.
Avoid: 1. 'I'll tell Claude not to keep it' · 2. uploading all columns when you need three · 3. anonymizing so badly you lose the duplicates

6.3 Following your organization's AI policy

Know your policy's approved tools, data rules, approvals and review steps. When a request breaks it, offer the compliant route, and report mistakes the same day.
Avoid: 1. a flat 'no' with no alternative · 2. installing outside Skills or connectors without approval · 3. using a personal account 'just this once'

6.4 Ethics: fairness, openness and accountability

Check for fairness, be open about AI use, put a name on every output, respect others' work, and keep the skills to judge what Claude gives you.
Avoid: 1. publishing AI work with no owner · 2. AI images passed off as real · 3. trusting outputs about people without a fairness check
