Part 5: Exam strategy

Claude Certified Associate Foundations course · cheat sheet

5.0 Part 5: Exam strategy

X1 How the questions are written

Read the question line first, name the domain, strike the clearly wrong, and let the scenario's constraint decide. Multiple response always tells you how many.

X2 Confusion pairs

Project for ongoing work, Skill for a reusable procedure, memory for what's learned. Search is quick, Research is deep. Anonymize before, not after. Claude's own check is never the final check.

X3 Why the safe-but-useful answer wins

Wrong answers send as-is, ban AI, self-check, or reach for the biggest model. The right answer keeps the value and adds the right control.

X4 Exam day

Matching ID, a clear desk, two minutes an item with a flag-and-return plan, and check the multiple-response counts at the end. Renew on time, it's free.

X5 What's changed since the guide

Names and buttons change, the principles don't. Answer by role and by principle, and check what's new before you sit the exam.

X6 A two-weekend study plan

Over two weekends, do the foundations and the biggest domain first, then the rest and the capstone, then two practice exams with a review in between.
